

Warehouse Survey Program

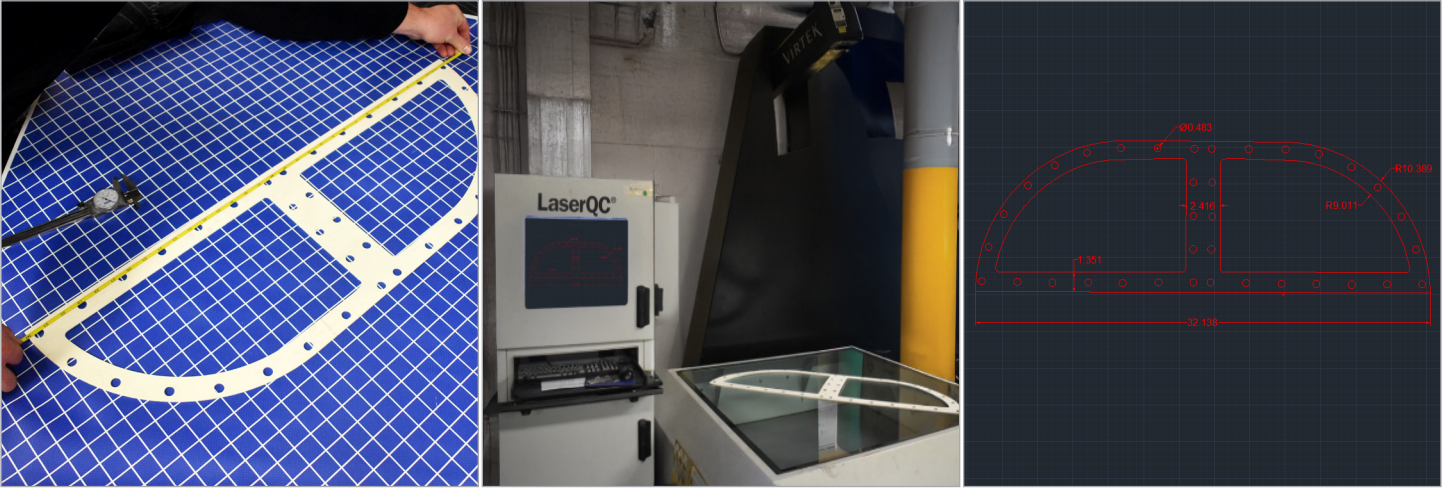

sealID™

Optimized Solution to Reduce Inventory & Costs

Curtiss-Wright's AP Services is a leader in fluid sealing technologies and services for commercial nuclear and fossil power plants, chemical, petrochemical, Department of Energy (DOE), Department of Defense (DoD), Original Equipment Manufacturers (OEMs), and the industrial market. We are recognized as a "Best in Class" company with outstanding customer service and quality. Our numerous customer recognitions and awards include Utilities Service Alliance (USA), First Energy, and Constellation "Supplier of the Year" awards, as well as Nuclear Energy Institute (NEI) TIP awards for packing and graphite pressure seal technology.

CURTISS - WRIGHT

Warehouse Survey Program

Curtiss-Wright's field service professionals conduct thorough, on-site warehouse surveys to identify and catalog warehouse items. We follow a proven process to identify gaskets, packing, O-rings, and other sealing products.

One of the major challenges utilities face is stock inventory accuracy. They may know a part fits specific equipment in their plant, and not realize its compatibility with multiple pieces of equipment across their plant and fleet.

Curtiss-Wright's Seal ID Stock Identification Software Program, is a web-based database housing all the information captured during a warehouse survey, along with Curtiss-Wright's full description of exactly what the item is, not just what were it goes or what it does. Searches can be performed by the CAT ID or Stock Code (SKU), or by OEM and OEM Part Number. Seal ID provides existing CAT ID description, material(s) found during the survey or upgraded/changed to, OEM information, part number, material, and a picture of the part.

The Seal ID Program provides a complete list of duplicate items linked to multiple CAT ID's or Stock Codes (SKU), allowing the customer to consolidate and manage inventory effectively across the entire fleet. The software will provide a standardized product description, flag and eliminate duplicate items, aggregate like parts and material(s) for standardization, and streamline warehousing. Seal ID gives the utility a true picture of their inventory and arms the end user with the proper information to make accurate cost-saving decisions.

Program Benefits

- **Reduce Direct and Indirect Cost:** Providing "like for like" or equals to OEM sealing products. This can provide a significant cost savings compared to the OEM. Indirect cost saving benefits result from placing items on blanket POs to achieve better lead times, reduce multiple vendors, and provide accurate descriptions.
- **Inventory Reduction:** Duplicate items are identified for consolidation. Consolidation of duplicate stock codes reduces the total number of stocked items by combining them into a single item.
- **Eliminate Obsolescence:** After we capture the information for the part, it allows us to continuously supply the item, even if the OEM discontinues the product availability.

Why Curtiss-Wright?

- **200 Years of Combined Experience:** Our highly skilled fluid sealing team can provide you with remarkable expertise from over 200 years of combined experience.
- **Technical Services:** Curtiss-Wright technicians can perform valve unpacks and repacks, provide oversight on packing programs, and manufacture custom gaskets with our Waterjet and Atom Flash cutters.
- **24/7 Customer Service:** Our customer service representatives are available 24/7 to troubleshoot any questions or concerns.
