

Synthetic Mechanical Packing

AP STYLE 1715A

**CURTISS -
WRIGHT**

AP Style 1715A

Style 1715A is manufactured with special syntax fiber, with each stand impregnated with PTFE dispersion. After braiding, the packing is treated with a break-in lubricant for easy shaft run-in. Style 1715A is an excellent asbestos replacement packing for general service applications where a clean and reliable packing is necessary.

Style 1715A can be used on centrifugal and rotary pumps and valves. In an environment of chemicals, weak acids, alkalis, air, dry industrial gases, petroleum, and synthetic oils, this style makes excellent general service packing. Style 1715 is available as individual rings, combination sets, and in bulk.

Typical Properties

Maximum Temperature
500 °F
Maximum Shaft Speed
1,500 FPM
pH Range
4 - 10
Construction
Lattice Braid
