				l	I		
Section 3 – Hazards Ider						57	
Route of Entry:	lbsorption/cont	act 🗵 E	ye Contac	t 🗵 II	nhalation		
[Emergency Overview]							
High concentration of graphit tract.	te dusts ma	ay be irritating to	o the ey	res, skin, mucou	us membrane	s, and respiratory	
[WHMIS Symbols]							
N/A							

Safety Data Sheet

[Potential Health Hazard] Eye – Eye contact may cause slight chemical and mechanical irritation. Skin - Dermal irritation and allergic skin reaction if dust contacts skin for prolonged or repeated periods. May cause abrasion with resulting irritation and rash. Inhalation - Release of large amounts of dust may cause upper respiratory tract irritation and dust related lung disease. Ingestion – Low toxicity if ingested. Section 4 - First Aid Measures Skin Contact: Frequent washing will deter transitory chemical and mechanical dermatitis. If rash develops consult a physician. Eye Contact: Immediately wash eyes with water for at least 5 minutes. Seek medical attention is discomfort persists.

Remove patient to fresh air. If breathing is difficult, oxygen may be administered. If breathing has stopped, artificial respiration should be started immediately. Seek medical attention.

Ingestion:

Inhalation:

Ingestion is not expected to be an important route into the body. If, however, the material is ingested, give 2 glasses of water and induce vomiting.

Soction E Fire Fight	ing Maac	Iroc			1
Section 5 – Fire Fighting Measures Flammable: If yes, under what conditions?					
 ☑ Yes ☑ No Bulk material is non-combustible. Dust are combustibleUse water, carbon dioxide, dry chemical or foam 					
Means of Extinction:					
Material in or near fires sl	nould be co	oled with a water spray or	fog. A self-	n dioxide, dry chemical or foam contained breathing apparatus hing should be worn for comba	,
Flashpoint (°C) and Method:		Upper Flammable Limit (% by Volur	ne):	Lower Flammable Limit (% by Volume):	
N/A		N/A		N/A	

Safety Data Sheet

Middleburg Hts., OH

Auto ignition Temperature (°C):	Explosion Data – Sensitivity to impact:	Explosion Data – Sensitivity to Static Discharge:
N/A	N/A	Large concentrations of air-born dust may produce a low power explosion if ignited.
Hazardous Combustion Products:		
Thermal decomposition or combustion or ganic compounds whose composition		s of carbon and low molecular weight
[NFPA]:		
Health: 1; Flammability: 0; Instabilit	y: 0	
Section 6 – Accidental Release	Measures	
Leak and Spill Procedures:	Moderate	<u> </u>
As gasketing, product does not spill fitted with a HEPA filter or wet mopp		st may be vacuumed using a vacuum
Section 7 – Handling and Stora	ago.	
Handling Procedures and Equipment:	lge	I
Avoid causing dust.		
Storage Requirements:		
Store in labeled, closed containers a	way from heat, spark, open flames, a	and other sources of ignition. Do not

store with or near incompatible chemicals. Do not let containers of material accumulate in the workplace. Promptly clean up any spills of dust that may occur. Any dusts generated during handling or processing should be cleaned up by wet mopping or vacuuming with a unit which contains a HEPA filter. Dry sweeping can re-suspend particulate matter in the atmosphere.

Section 8 – Exp	posure	Controls/	Personal	Protection
•	•	•		

Exposure limits:	□ ACGIH TLV	⊠ OSHA PEL	☐ Other (specify)
------------------	-------------	------------	-------------------

Specific Engineering Controls (such as ventilation, enclosure process)

Ventilation - If dusts are generated during processing or use, local exhaust ventilation should be provided to maintain exposures below the limits. Designed details for local exhaust ventilation systems may be found in the latest edition of "Industrial Ventilation: A manual of recommended practices" published by the ACGIH committee on "Industrial Ventilation, P.O. Box 16153, Lansing, MI 48910. The need for local exhaust ventilation should be evaluated by a professional industrial Hygienist. Local exhaust ventilation systems should be designed by a professional engineer.

Personal Protective Equipment Gloves Respirator Eye Footwear Glothing other	Safety Data Sheet						
Protective Gloves - Protective gloves are recommended to prevent cuts, abrasions, and irritation during handling and storage. Work/Hygienic Practices All chemicals should be handles so as to prevent eye contact and excessive or repeated skin contact. Appropriate eye and skin protection should be employed. Inhalation of dusts and vapors should be avoided. Respiratory - If exposure sexceed the limits by less than a factor of 10, use in a minimum a NIOSH approved 1/2 face piece respirator equipped with cartridges for particulate matter with an exposure limit of not less than 0.05mg/m3. If exposure exceed 10 times the limit. Consult a professional industrial hygienist or your respiratory protective equipment supple for selection of the proper equipment. The evaluation of the needed for respiratory protection should be determined by a professional industrial hygienist. Eye Protection - Protection glasses with side-shields should be worn to prevent eye contact with particulate matter. Other Protective Clothing or Equipment - Where normal work clothes may become soiled by dusts, coveralls are recommended. Wash solid clothing before reuse. Section 9 - Physical and Chemical Properties Physical State: Odor and Appearance: Odor and Appearance: Odor Threshold: Non-significant Hydrocarbon Specific Gravity: Vapor Density (ar = 1): Vapor Pressure (mmHg): N/A N/A N/A Sevaporation rate: N/A N/A Section 10 - Stability and Reactivity Chemical Stability Yes	Personal Protective Equipment	s 🛮 Respirator	⊠ Eye	☐ Footwear	□ clothing	☐ other

Condition to avoid – Incompatible materials, ex	ccessive heat
Reactivity and under what conditions:	
None Known	
Hazardous Decomposition Product:	
Carbon monoxide, carbon dioxide	
Section 11 – Toxicological Information	
Effects of Acute Exposure:	
High concentration of graphite dusts may be in tract	ritating to the eyes, skin, mucous membranes, and respiratory
Effects of Chronic Exposure:	
pneumoconiosis. Symptoms can include coug	aphite dusts over prolonged periods of time may cause h, shortness of breath, and decrease in pulmonary function. Preema may possible be aggravated by prolonged exposure to high
Irritancy of Product:	
Relative	
Skin Sensitization:	Respiratory Sensitization:
Relative	Relative
Carcinogenicity – IARC:	Carcinogenicity – ACGIH:
Not listed as Carcinogenic	Not listed as Carcinogenic
Reproductive Toxicity:	Teratogenicity:
No data available	No data available
Embryo toxicity:	Mutagenicity:
No data available	No data available
Name of Synergistic Products / Effects:	1
No data available

Section 15 – Regulatory Information		
[WHMIS Classification]	[OSHA]	
Not Classified	Health: 2 ; Flammability: 1 ; Instability: 0	
[SERA]	[TSCA]	
No data available	No data available	
This product has been classified in accordance with the hazard contains all of the info	I d criteria of the Controlled Products Regulations (CPR) rmation required by CPR.	and MSDS

Section 16 – Other Information

Use: The limitations of use decrease significantly as gasket thickness increases. Do not use a thicker gasket material or "double gaskets" to solve a gasket problem without first consulting the manufacturer. Curtiss-Wright engineers can advise on gasket selection and installation based on specified operating conditions. If you are in any doubt, visit our website at www.cwnuclear.com, fax us at 724-295-6201 or phone us at

Safety Data Sheet

+1.216.267.3200.

All gaskets should be cut by trained personnel only. Incorrect cutting can produce weaknesses in a gasket that may not be visible, but could cause failure. Gasket installation should be carried out by trained personnel only.

The ability of a gasket material to make and maintain a seal depends not only on the quality of the gasket material, but also on medium being sealed, the flange design, the amount of pressure applied to the gasket by the bolts and how the gasket is assembled into the flanges and tightened.

The higher the operating pressure and/or temperature, the greater the care and expertise required in selecting and installing gaskets. This includes, but is not limited to: confirmation that the flanges are suitable for the intended use; the finish on the flange faces; the parallelism of the flange faces; confirmation that the studs, bolts, washers and nuts are suitable for the intended use and in good condition; no anti stick compound is applied to the flanges or gaskets; confirmation that the gasket material and thickness are suitable for the intended use; and the gasket is evenly loaded by the correct tightening sequence of the bolts or studs, and to the correct torque to give the required gasket assembly stress. The use of torque wrenches, hydraulic bolt tensioners or other loading devices can assist achievement of the correct gasket stress.

The application of release agents to the gasket or flanges may cause gasket failure.

Because conditions of use are beyond the manufacturer's control, it is the responsibility of the user to ensure that the product is suitable for the intended use.

WARNING: Catastrophic gasket failure can be caused by steam or water hammer. Steam or water hammer can cause an instantaneous increase in internal pressure on the assembly that far exceeds the design or test pressures. Where water hammer exists, the basic problem should be corrected. DO NOT USE AP MATERIAL IN APPLICATIONS WHERE WATER OR STEAM HAMMER MAY STRESS THE GASKET BEYOND ITS DESIGN TOLERANCES

The information above is believed to be accurate and represents the best information available to us. However, we make no warranty expressed or implied, with respect to such information, and we assume no liability resulting from its use.
