Section 6 – Accident Leak and Spill Procedures:	ital Release Meas	sures		
As Valve Packing, proc vacuum fitted with a HI	the state of the s		ccumulated dust may be	vacuumed using a
Section 7 – Handlin Handling Procedures and Equip				
In normal handling of s		no significant release	of dust occurs.	
Storage Requirements:				
While there are no haza	ards associated with	n storage we recomn	nend the following storage	conditions.
Storage temperature b	elow 75°F			
Humidity between 50%	o - 60%			
Darkened storage roor	n			
If these conditions are	met, a useful life of	5 years can be expe	cted.	
Section 8 – Exposu	re Controls/Pers	onal Protection		
Exposure limits:	☐ ACGIH TLV	☐ OSHA PEL	☐ Other (specify)	
Specific Engineering Controls (s Ventilation needed only			aust may be necessary fo	r some applications.
Personal Protective Equipment	⊠ Gloves ⊠	Respirator 🗵 Eye	☐ Footwear ⊠ clothin	ng 🗆 other

Safety Data Sheet

If marked, please specify type:

Skin protection - For brief contact, no precautions other than clean body-covering clothing should be needed. When prolonged or frequent repeated contact could occur, use protective clothing and gloves such as butyl rubber to prevent skin irritation and dermatitis.

Respiratory Protection - Respiratory protection is not required under normal processing of sheet gaskets. Respiratory protection is required when dust-emitting activates (grinding, pile driving, sanding, etc.) are performed. Use only NIOSH/MSHA approved air-purifying respirators or positive pressure, self-contained breathing apparatus when exposure guidelines are greatly exceeded. In confined or poorly ventilated areas, use approved SCBA device.

Eye Protection – Safety glasses are recommended when dust-emitting activates occur.

Section 9 – Physical and	Chemical Properties			
Physical State:	Odor and Appearance:	Odor Threshold:		
Solid	No odor, Black in color	Not relevant		
Specific Gravity:	Vapor Density (air =1):	Vapor Pressure (mmHg):

Aquatic Toxicity:

No data available

Safety Data Sheet

Section 13 - Disposal Considerations

Waste Disposal:

Valve Packing materials are not hazardous waste as defined under RCRA. However, since waste disposal laws vary within states and municipalities, disposal of these products should be in accordance with all local, state, and federal laws and regulations (contact local or state environmental agencies for specific rules).

Special Shipping Information:				
No special precautions necessary

This product has been classified in acc	 ordance with the hazard criteria of the Controlled Products R contains all of the information required by CPR.	Regulations (CPR) and MSDS		

Section 16 – Other Information

Use: The limitations of use decrease significantly as gasket thickness increases. Do not use a thicker gasket material or "double gaskets" to solve a gasket problem without first consulting the manufacturer. Curtiss-Wright engineers can advise on gasket selection and installation based on specified operating conditions. If you are in any doubt, visit our website at www.cwnuclear.com, fax us at 724-295-6201 or phone us at +1.216.267.3200.

All Packing should be cut by trained personnel only. Incorrect cutting can produce weaknesses in a gasket that may not be visible, but could cause failure. Gasket installation should be carried out by trained personnel only.

Safety Data Sheet

The ability of a gasket material to make and maintain a seal depends not only on the quality of the gasket material, but also on medium being sealed, the flange design, the amount of pressure applied to the gasket by the bolts and how the gasket is assembled into the flanges and tightened.

The higher the operating pressure and/or temperature, the greater the care and expertise required in selecting and installing gasketing. This includes, but is not limited to: confirmation that the flanges are suitable for the intended use; the finish on the flange faces; the parallelism of the flange faces; confirmation that the studs, bolts, washers and nuts are suitable for the intended use and in good condition; no anti stick compound is applied to the flanges or gaskets; confirmation that the gasket material and thickness are suitable for the intended use; and the gasket is evenly loaded by the correct tightening sequence of the bolts or studs, and to the correct torque to give the required gasket assembly stress. The use of torque wrenches, hydraulic bolt tensioners or other loading devices can assist achievement of the correct gasket stress.

The application of release agents to the gasket or flanges may cause gasket failure.

Because conditions of use are beyond the manufacturer's control, it is the responsibility of the user to ensure that the product is suitable for the intended use.

WARNING: Catastrophic gasket failure can be caused by steam or water hammer. Steam or water hammer can cause an instantaneous increase in internal pressure on the assembly that far exceeds the design or test pressures. Where water hammer exists, the basic problem should be corrected. DO NOT USE AP MATERIAL IN APPLICATIONS WHERE WATER OR STEAM HAMMER MAY STRESS THE GASKET BEYOND ITS DESIGN TOLERANCES

The information above is believed to be accurate and represents the best information available to us. However, we make no warranty expressed or implied, with respect to such information, and we assume no liability resulting from its use.

[Optional, not required under WHMIS]
