damage.								
[WHMIS Symbols]								
N/A								
[Potential Health Hazard]								
Eye – Eye contact may cause slight chemical and mechanical irritation.								
Skin - Dermal irritation and allergic skin reaction if dust contacts skin for prolonged or repeated periods. May								
cause abrasion with resu	cause abrasion with resulting irritation and rash.							
Inhalation - Release of la	rge amoun	ts of dust may cause upper respirator	v tract irritation and dust related lung					
disease (fibrosis).	igo amoun	to or dust may sause appear respirator,	y tract initiation and dact related lang					
Ingestion – Low toxicity if	ingested.							
Continu 4 First Aid B	10							
Section 4 – First Aid N	weasures							
Frequent washing will de	ter transitoi	ry chemical and mechanical dermatitis	s. If rash develops consult a physician					
Eye Contact:								
Immediately wash eyes v	vith water f	or at least 5 minutes. Seek medical at	tention is discomfort persists.					
Inhalation:								
Remove patient to fresh a	air. Seek mo	edical attention						
Remove patient to fresh air. Seek medical attention.								
Ingestion:								
Induce vomiting and seek medical attention.								
Saction E Fire Fight	ing Magg	Iroc						
Section 5 – Fire Fight Flammable:		vhat conditions?						
Means of Extinction:								
Use water, DRY chemical, carbon dioxide, foam, or water spray. Use adequate personal protective equipment

Hazardous Combustion Products:		
Carbon monoxide and Carbo	n dioxide	
[NFPA]:		
N/A		
Section 6 – Accidental R	elease Measures	
Leak and Spill Procedures:		
As Gasketing, product does	not spill or create a release. Accu	imulated dust may be vacuumed using a vacuum
fitted with a HEPA filter or we	et mopped for cleanup.	
Section 7 – Handling and Handling Procedures and Equipment:	Storage	
In normal handling of sheet a	and gaskets, no significant releas	e of dust occurs.
Storage Requirements:		
While there are no hazards a	ssociated with storage we recom	mend the following storage conditions.
Storage temperature below 7	75°F	
Humidity between 50% - 60%	6	
Darkened storage room		
If these conditions are met, a	useful life of 5 years can be exp	ected.
Section 8 - Exposure Co	ntrols/Personal Protection

If marked, please specify type:		

Safety Data Sheet

Skin protection - For brief contact, no precautions other than clean body-covering clothing should be needed. When prolonged or frequent repeated contact could occur, use protective clothing and gloves such as butyl rubber to prevent skin irritation and dermatitis.

Respiratory Protection - Respiratory protection is not required under normal processing of sheet gaskets. Respiratory protection is required when dust-emitting activates (grinding, pile driving, sanding, etc.) are performed. Use only NIOSH/MSHA approved air-purifying respirators or positive pressure, self-contained breathing apparatus when exposure guidelines are greatly exceeded. In confined or poorly ventilated areas, use approved SCBA device.

Eye Protection – Safety glasses are recommended when dust-emitting activates occur.

Section 9 - Physica	al and Chemical Properties		
Physical State:	Odor and Appearance:	Odor Threshold:

Section 10 – Stabil	itv and Reactivitv		
Chemical Stability	If no, under which conditions?		

Section 10 – Stability and Reactivity

Chemical Stability

If no, under which conditions?

Incompatibility With Other Substances

If yes, which ones?

X Yes □ No

Strong oxidizers, strong Acids and bases

(Conditions to avoid) Avoid open flame, welding arcs, or high temperature sources which induce thermal decomposition.

Reactivity and under what conditions:

(Specific materials to avoid) Avoid strong oxidizers, strong Acids and bases. Exposure to these chemicals may cause premature product degeneration.

Safety Data Sheet

Hazardous Decomposition Prod	:tout
------------------------------	-------

Carbon dioxide and carbon monoxide.

Section 11 – Toxicological Information	
Effects of Acute Exposure	
Inhalation or ingestion of finely divided powder or	r dust may be harmful.
Effects of Chronic Exposure:	
Contains fibers and particulates. Avoid Creating of damage.	dust. Breathing Gasket dust may cause permanent lung

Aquatic Toxicity:

No data available

Section 13 - Disposal Considerations

Safety Data Sheet

Waste Disposal: Gasket materials are not hazardous waste as defined under RCRA. However, since waste disposal laws vary within states and municipalities, disposal of these products should be in accordance with all local, state, and federal laws and regulations (contact local or state environmental agencies for specific rules).

Section 14 - Transport Information		
Special Shipping Information:		
No special precautions necessary.		
		PIN

Not regulated	Not regulated	
This product has been classified in accordance with the contains all c	ne hazard criteria of the Controlled Products R of the information required by CPR.	egulations (CPR) and MSDS

Section 16 – Other Information

Use: The limitations of use decrease significantly as gasket thickness increases. Do not use a thicker gasket material or "double gaskets" to solve a gasket problem without first consulting the manufacturer. Curtiss-Wright engineers can advise on gasket selection and installation based on specified operating conditions. If you are in any doubt, visit our website at www.cwnuclear.com, fax us at 724-295-6201 or phone us at +1.216.267.3200.

All gaskets should be cut by trained personnel only. Incorrect cutting can produce weaknesses in a gasket that may not be visible, but could cause failure. Gasket installation should be carried out by trained personnel only.

The ability of a gasket material to make and maintain a seal depends not only on the quality of the gasket

Safety Data Sheet

material, but also on medium being sealed, the flange design, the amount of pressure applied to the gasket by the bolts and how the gasket is assembled into the flanges and tightened.

The higher the operating pressure and/or temperature, the greater the care and expertise required in selecting and installing gaskets. This includes, but is not limited to: confirmation that the flanges are suitable for the intended use; the finish on the flange faces; the parallelism of the flange faces; confirmation that the studs, bolts, washers and nuts are suitable for the intended use and in good condition; no anti stick compound is applied to the flanges or gaskets; confirmation that the gasket material and thickness are suitable for the intended use; and the gasket is evenly loaded by the correct tightening sequence of the bolts or studs, and to the correct torque to give the required gasket assembly stress. The use of torque wrenches, hydraulic bolt tensioners or other loading devices can assist achievement of the correct gasket stress.

The application of release agents to the gasket or flanges may cause gasket failure.

Because conditions of use are beyond the manufacturer's control, it is the responsibility of the user to ensure that the product is suitable for the intended use.

WARNING: Catastrophic gasket failure can be caused by steam or water hammer. Steam or water hammer can cause an instantaneous increase in internal pressure on the assembly that far exceeds the design or test pressures. Where water hammer exists, the basic problem should be corrected. DO NOT USE AP MATERIAL IN APPLICATIONS WHERE WATER OR STEAM HAMMER MAY STRESS THE GASKET BEYOND ITS DESIGN TOLERANCES

The information above is believed to be accurate and represents the best information available to us. However, we make no warranty expressed or implied, with respect to such information, and we assume no liability resulting from its use.

[Optional, not required under WHMIS]
